

SYNERGISTIC APPROACH IN THE STUDY OF BILINGUALISM INTERCONNECTION LANGUAGE INTERACTIONS, DIGLOSIYA, INTERFERENCE

The article presents two major scientific approaches – anthropocentrism and antropnost. By combining their principles, the inter-linguistic interactions by diglosiya, interference, bilingualism are discussed. The most important moments in the history of the Bulgarian language on the territory of Bulgaria and beyond are analyzed.

Systematic implementation of material can be studied through the conceptualization of two typological construct: anthropocentrism and anthropic. Anthropocentrism of classical scientific paradigm explores the system as a linear, hierarchical and equilibrium. Its main principles – the opposition, isomorphism and reductionism. Anthropocentrism is disciplinary. Anthropic is a scientific concept of synergy, it considers non-linear, non-equilibrium and open systems. System existence of matter is possible only in conjunction with the chaos. The emergence and development of the system is a joint implementation of regular and casual processes. Synergetics postulates the world unity and is characterized by interdisciplinary.

Language system combines symmetrical, closed, equilibrium, stable and asymmetrical, open, non-equilibrium and unstable systems.

There are carried out an analysis of the most important moments in the history of the Bulgarian language in Bulgaria and abroad – in Bessarabia and Tavia from the methodological apparatus of synergy in the article.
