## **REALIZATION OF PROGRAM DOCUMENTS AT TRAINING OF AGRARIANS**

The multi-faceted and diversified system of agriculture, which operates in Ukraine is not only an active participant in economic programs of the government, but also important factor in the development of macroeconomic climate, leading factor in the growth of productive forces is a man. The effective work of agriculture is impossible without creating the atmosphere of general interest, the creative activity of every worker, readiness to take responsibility for making decisions. Investment in human resources and personnel work is a long-term factor in the competitiveness and viability of agricultural sector. We can say that the "garden" is a system of agriculture, which must "grow" professional specialists. Except of special knowledge specialists of agricultural sphere should master many qualities: on the one hand, the diligence and thoroughness necessary in such work, on the other, the ability to comprehend complex process, the ability to combine it to the whole, to know deeply laws, regulations, guidelines and leading technologies and so on.

The main requirements to level of professional training of students of higher educational establishments are reflected in the Law of Ukraine "About education," State national program "Education" ("Ukraine of the XXI century"), the Law "About higher education". The preparation of modern specialists of agricultural sector should be oriented on the forming of effective host-holder, which would have mastered the theoretical knowledge and modern technologies in agricultural production, and was able to creatively use the experience of other countries, to carry out the experimental work by means of informational technologies.

The necessary is the innovative approach to the professional activity of future farmers, in particular, widely using in the educational process of higher educational establishments the informational technologies of teaching, where the main are the computer technologies, which operating is not only as a supplement to existing the system of training, but as a means of mastering the fundamental and professionally oriented disciplines relating to the content of training. That is why they should be considered in the context of professional education technology.

The purpose of the article is to consider the essence of the main program documents which contain requirements for professional training of specialists.

The analysis of the experience of European researchers in the field of higher education as for determining of results of study at international, national and local levels has allowed saying that the majority of legal documents, regulations raise the question as for the quality of professional training.
